

Using IEEETran.cls

Nandakumar Edamana, 2018
nandakumar.org

IEEETran provides the template for a wide range of IEEE publications. It is recommended that you use this class instead of duplicating the style of IEEE papers manually.

Installation from Repository

- The Debian package *texlive-publishers* usually installs templates including *acmart*. If IEEETran is not installed with it, try installing *texlive-full* or other methods.

Manual installation

- Download the package from <https://ctan.org/tex-archive/macros/latex/contrib/IEEEtran>
- You can also get *ieeetran-final_sub.tar* from <https://www.computer.org/web/peer-review/journals>
- Copy the file *IEEETran.cls* and place it in a subdirectory (say *ieee*) under \sim /*texmf/tex/latex/*
- Now you can use \backslash *documentclass{IEEETran}*
